# 4LV SERIES

150-170-195-230-250 MHP

**Featuring the latest engine technologies the 4LV Series is undoubtedly cleaner, quieter, and produces more torque & acceleration than any other engine in its class. 4LV is the ideal solution for sailing yachts over 50 ft, super yacht tenders, small motorboats and light duty commercial vessels.**

The 4LV proves to be an extremely efficient engine without any compromise on quality. Featuring the newest system in common rail technology, the mid-range engines deliver maximum performance and reliability, while maintaining minimal fuel consumption and exceptionally low noise & emission levels. By exceeding the strict EPA Tier 3 and EU RCD Stage 2 emission regulations, the engines feature virtually smoke and odor free operation.

Equally, the 4LV doesn't disappoint in performance. The 2.8 L displacement delivers a powerful low-end torque performance. This results in a stunning acceleration and really sets these engines apart from others in their power range.

To ensure support of advancing marine technologies, direct connectivity to NMEA and J1939 CAN-bus networks has been purpose engineered into the 4LV range, allowing future-proofed integration to any multifunction bridge display. The 4LV range will be complemented by a choice of YANMAR's expanding controls, including the VC20 electronic control panel, providing real time diagnostics, and the joystick system, providing innovative maneuvering solutions.
